Getting Started

1

When should I install my eSIM?

To ensure a smooth setup process, we recommend installing your eSIM just before your departure, as installation requires a stable Internet connection.

However, if you prefer, you can wait until you arrive in your destination country to activate your eSIM using WIFI.

If you installed your eSim in your home country, you can turn the eSim off until you reach your destination country. Activation of the package only occurs when you use your eSIM in the country / region where it is eligible for connection.

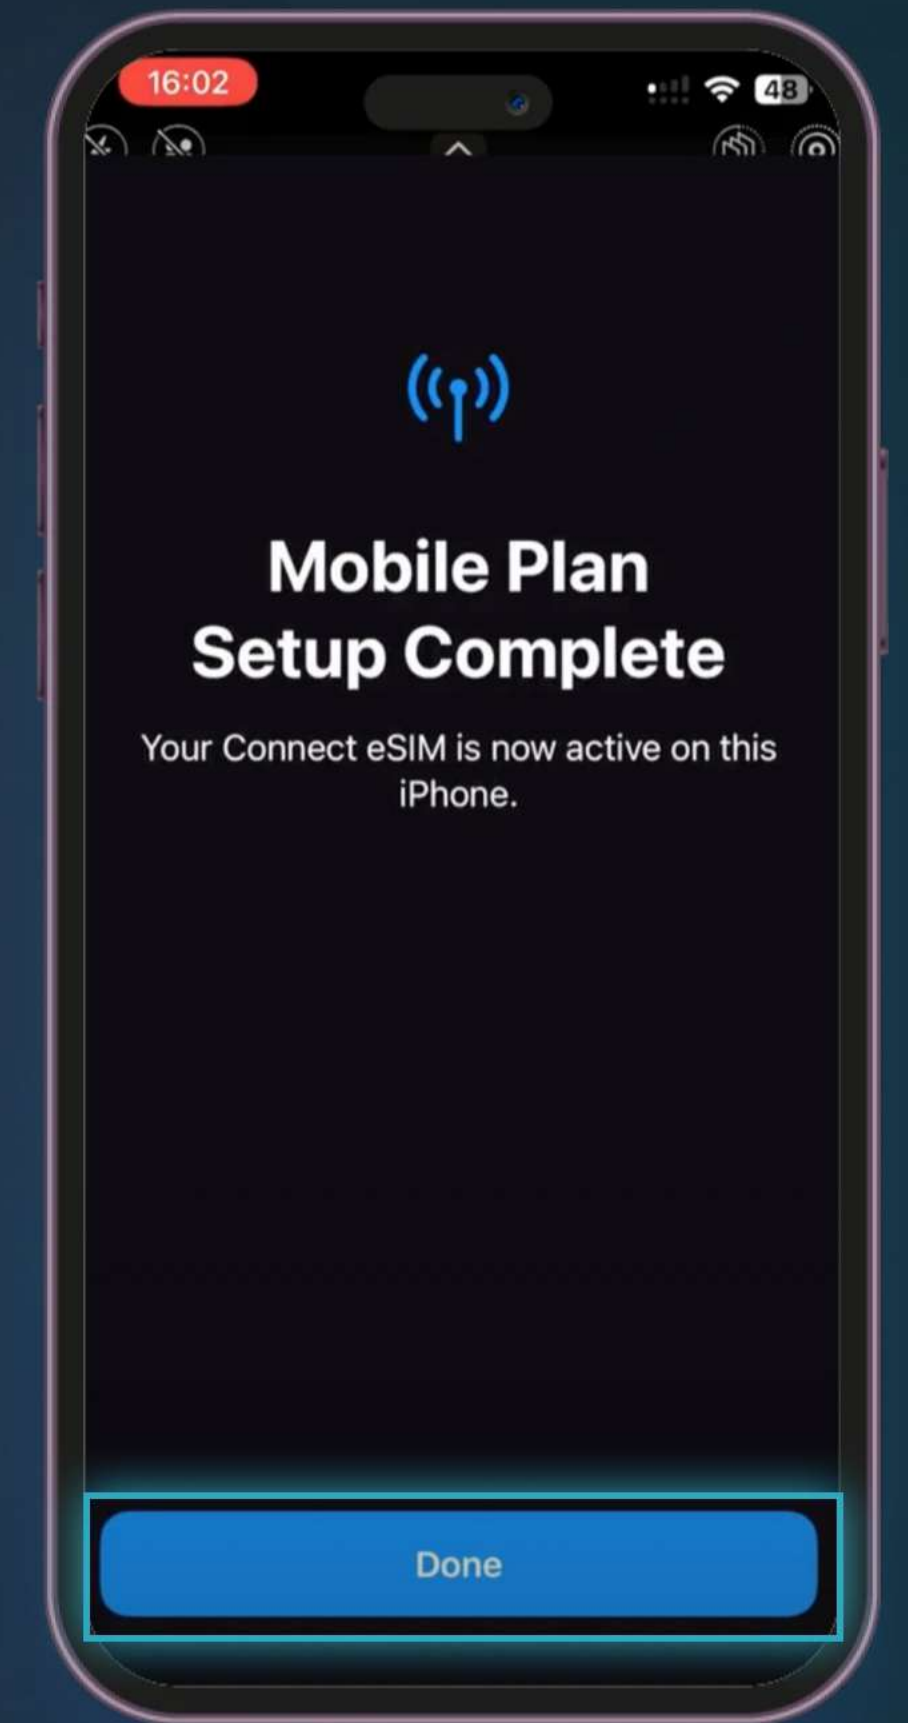

Before You Travel
